# Product description

## Perfect models for the highest orthopaedic demands

Our mules and sandals have been specially designed to meet the highest orthopaedic requirements – of course, perfectly suitable for orthopaedic insoles.

Selected, high-quality materials meet sophisticated construction for the best fit and long-lasting comfort.

## Feels like a second skin

The upper, which is equipped with a soft lining, reduces friction and fits gently. High manufacturing standards and precise workmanship minimise pressure points and thus ensure the best possible wearing comfort.

The variability of our shoes covers all essential comfort widths, allowing us to cater to many feet with just a few models.

## 2-strap version

Basic width H, adjustable from width G to J.

The wide sole shape optimally covers around two-thirds of all foot shapes.

## 3-strap version with decorative element

For even more volume: basic width J, ideal for feet from H to almost K.

# The sole - **the basis,** the heart of our shoes

- Ⓜ is lightweight
- Ⓜ protects our musculoskeletal system, especially on hard surfaces
- Ⓜ provides excellent cushioning
- Ⓜ is very slip-resistant thanks to two components on the outsole and ensures a secure footing
- Ⓜ has a stable frame
- Ⓜ is very stable yet flexible and soft
- Ⓜ is ideal for height adjustments
- Ⓜ has a rounded heel strike zone for joint-friendly, cushioned walking

**Our sole – wide across the entire tread – ensures optimal weight distribution, safety, support and maximum comfort!**
