than ever**

XtremeFit

# XtremeFit

## PROTECTION ENGINEERED. NOT JUST DESIGNED.

One piece. Extreme protection.

XtremeFit wraps around the prosthesis as a single seamless shell, secured by powerful integrated magnets. No gaps, no weak points.

Its interior is engineered with built-in impact-absorption structures that take the hit, so the prosthetic components never have to.

Deep-dyed through the entire material (not painted on the surface) for a finish that resists scratches, impacts and daily wear without showing it.

Colour **deep-dyed** through the full material. Not painted. Scratches don't show.

**Internal absorption structures** to protect components, extending lifespan and minimising damage.

High-resistance **flexible material**, engineered to absorb impact without breaking.

**Single-piece design** with magnetic closure. Seamless fit, fast on, fast off.

**Fully custom.** Available for TT & TF, fitted to each patient's specific prosthesis.
