-AI Powered

-Calibrated via App

-The prosthetic offers impressive lifting capabilities

# ZINDAGI 2.0 FEATURES

## **Swappable Battery System:**

The battery is designed to be easily swappable. 750 mAh battery providing up to 30 hours of moderate usage in single charge.

## **Weight Lifting Capacity:**

Below Elbow Model: Can lift up to 3-5 kg.

## **Power Light Indicator:**

A visible power light shows when the Zindagi 2.0 is turned on, providing clarity and assurance during operation.

# ABOVE-ELBOW

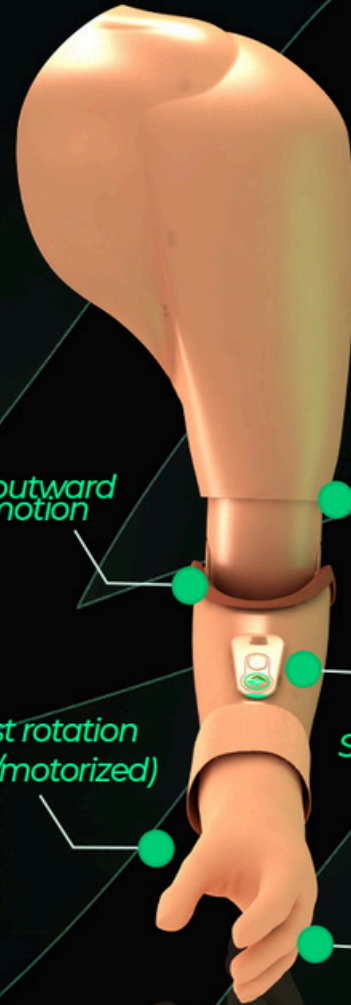

Inward & outward  
elbow motion

Sensor Based Smooth  
up and down movement

270° wrist rotation  
(manual/motorized)

Swappable  
Battery

Sensor Control Palm  
for Open & Close Functions

# **ABOVE-ELBOW, BILATERAL**

**NO SURGERY, JUST POSSIBILITY**

## **NO SURGERY NEEDED**

The prosthetic system works without requiring any medical implants or surgical procedures. It's non-invasive, safe, and easy to integrate into daily life.

## **INTUITIVE MUSCLE CONTROL**

Uses smart muscle signal detection to respond naturally to the user's movement, giving full control without added effort.

## **BILATERAL FUNCTIONALITY**

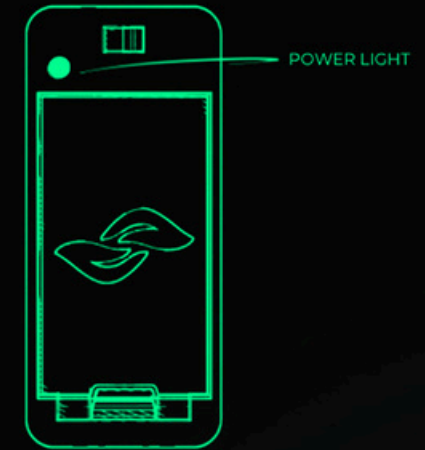

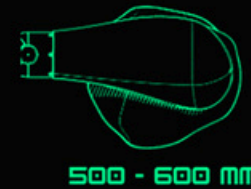

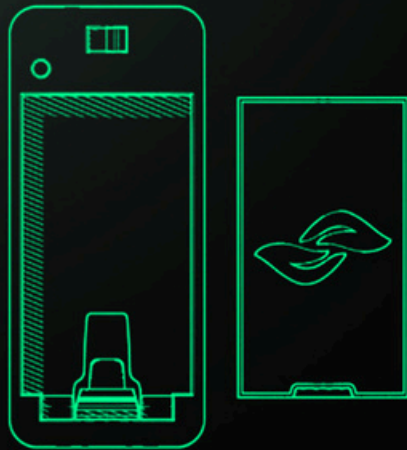

Designed specifically for individuals with both arms affected, allowing users to perform tasks with both limbs independently. Weight lifting capacity of above elbow model is upto 1.5 -3 kg

## **CUSTOM FIT AND COMFORT**

Each device is customized to the user's body, ensuring a snug fit and minimizing discomfort over long hours of use.

# ABOVE ELBOW FEATURES

## **Swappable Battery System:**

The battery is designed to be easily swappable. 850 mAh battery providing up to 30 hours of moderate usage in single charge.

## **Weight Lifting Capacity:**

Above Elbow Model: Can lift up to 1.5-3 kg.

## **Power Light Indicator:**

A visible power light shows when the Zindagi 2.0 is turned on, providing clarity and assurance during operation.

# **WRIST ROTATION IN** ZINDAGI 2.0

## **TURN BACK TIME WITH EVERY TWIST**

### **270° NATURAL MOVEMENT**

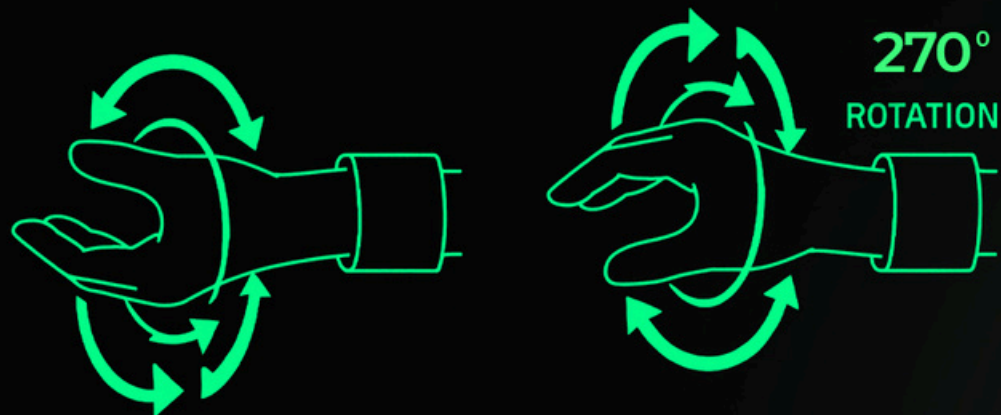

The wrist rotates up to 270° enable natural motions like turning a key, or adjusting tools.

### **MUSCLE SIGNAL**

Users can control wrist rotation through muscle signals, depending on their comfort and preference.

### **IMPROVED GRIP**

Wrist movement helps align grips more naturally, reducing fatigue and making complex tasks easier to handle.
