

The new waterproof

Clutch-Lock 10S1/W

Trusted technology meets innovation

The popular Streifeneder Clutch-Lock is now also available in a waterproof version. The 10S1/W model is **fresh, chlorine and salt water proof**. It can be used for water sports and even in the sauna.

The waterproof properties have been confirmed in extensive laboratory and application tests.

The high-quality housing made of fibre-reinforced plastic guarantees optimum quality and longevity. The lock is particularly durable: the plastic does not absorb water and is completely resistant to corrosion. The pin guide in the housing remains permanently stable.

As the material does not require any coating, the pin leaves hardly any marks.

The freedom of alignment enables fittings that meet the individual needs of patients – even with regard to contractures and special joint positions.

The 10S1/W also excels when it comes to user-friendliness: the left-hand thread makes it easy for professionals to fit with a high level of safety, while the golden metal push button indicates the type of locking system to the patient.

An additional bonus: The 10S1/W comes with an improved patient key, which makes donning easier.

At a glance

In addition to its resistance to fresh, chlorinated and salt water, the 10S1/W offers numerous other advantages:

- very **light construction**
- **compact** design
- **long-lasting** and **durable** due to fibre-reinforced plastic
- free plumb alignment, **no body weight restriction**
- left-hand thread for **easy installation** with maximum safety
- **stepless** and **silent** locking
- improved **patient key**
