### **ALPS SOUTH**

#### **ALPS High Density Gel – rigidity meets comfort**

US manufacturer, ALPS South (St. Petersburg, Florida), will be presenting their new line in prosthetic gel liners and knee sleeves for leg amputees, based on a new formula for high-density gel. This gel also offers more athletic users the control they want. Because of its dense, firm texture, it is particularly suited to amputees who are changing from silicone to gel.

ALPS Gel is now available for amputees at all activity levels. And, to add to that, there is now a broad spectrum of liners: with or without distal locking mechanism, with seals, with a uniform thickness of 3 or 6 mm, tapered (anterior / posterior, distal / proximal), with anti-oxidants or with high-density gel. In addition, ALPS liners can be supplied for use with your own brand or printed with your company logo.
