

## New products of 2018

### COP SAS Orthoproxy

Celebrating 30 years of polymers developments, COP moves forward in its innovation approach by enlarging its biocomposite offer with innovative and high-performance materials. Orthoproxy® resins, Bisphenol A-free partially biobased epoxy, commercialized on the orthopaedic field have an excellent compatibility with natural reinforcements such as flax and basalt fibers. COP deepened its partnership with composites field experts and developed a resistant, lower weight, and thermal insulant biocomposite based on woven bamboo fiber

by COBRATEX. Made from renewable and low toxicity components, this new material naturally contributes to preserve environmental resources and CPO's health.
