

## New products of 2018

**FIOR & GENTZ Gesellschaft für Entwicklung und Vertrieb von orthopädietechnischen Systemen mbH (developers and suppliers of orthopaedic technology)**

**CROSSROADS support shoe – highly functional with elegant looks, Orthosis Configurator 6.0 – to the optimum orthosis in four steps**

With their CROSSROADS, the orthopaedic technology company FIOR & GENTZ (Lüneburg, Germany) will be exhibiting a support shoe for the first time. CROSSROADS has been specially designed to meet the needs and wishes of adult support shoe wearers. Along with its high degree of functionality, the lace-up shoe sets itself apart because of its modern looks. High-quality materials and outstanding workmanship ensure maximum comfort when worn. Four different width combinations guarantee an optimum fit – with and without inserts.

FIOR & GENTZ first showed its Orthosis Configurator as early as 2006. This online application enables the orthopaedic staff, using patient data, to carry out an efficient and well-researched selection of system components and materials needed for the construction of an individual orthosis. In March 2018 its completely revised version, Orthosis Configurator 6.0, will go online. It comes in a new design with a modern and easy-to-manage user interface. The compression of different queries further produces a faster configuration result. Another new feature is an

individual ID for every configuration, which serves to provide seamless documentation and allocation of all documents. The orthosis configurator can be

used by everyone with internet access. After log-in the user has additional functions available.
