**New shoulder-arm adduction brace, Deltacare SFO**

The removable / replaceable shoulder-arm adduction brace, Deltacare SFO, is the new product for OTWorld from inocare Medical GmbH (Eschelbronn, Germany). This new model has three arm straps that attach with Velcro fastenings and can be positioned anywhere on the arm. As a result, the arm can be freely fixed to the trunk harness as required to immobilise the shoulder. Even without the shoulder harness, the brace holds the arm securely in position against the body. However, an optional shoulder harness with Velcro fastenings is also available.
