Manometric: ManoX – Instant Scan Solution

Manometric, from the Netherlands, will be introducing their 3D hand scanner, ManoX. In combination with the ManoStudio Fast Adjustment Software that goes with it, it provides all the data required for making individually fitted 3D-printed thumb braces. The software is designed to be user-friendly, thus making the orthopaedic technician's job easier.

ManoX and ManoStudio have been developed in cooperation with medical specialists at the Technical University in Delft.
