**Medical Specialties, Inc.**

**Med Spec – Supinator PTT™ Stabilizer for the treatment of PTTD**

The new Supinator from Med Spec (Charlotte, North Carolina, USA) is a convenient and comfortable bandage with a relatively low profile for use in the treatment of Posterior Tibial Tendon Dysfunction (PTTD). A patent has been applied for the design of the Supinator, which minimises overpronation by exerting a supinating force.

The arch strap, in combination with the arch pad, serves to raise the medial arch of the foot. The heel strap limits calcaneal eversion (at the heel). The arch-support pad can be removed if required, so that the Supinator can be worn with an orthopaedic insert. Moreover, it is equipped with the Speed Lacer II fastening, so as to make it easy to put on and to lace up evenly.
