Podocapture – mobile solution for foot-pressure measurement

Medicaptureurs will be showing Podocapture, its world-wide new product, at OTWorld 2018. This development, the first podometric application in the orthopaedic field, makes it possible to have wireless control of a pressure plate via a smartphone or tablet. Podocapture improves both communication with the patient and clinical examination. This mobile solution for foot-pressure measurement is available on iOS and Android terminals.
