

## New products of 2018

### Neskrid 4Allfeet b.v.

#### Made-to-measure orthopaedic safety shoes for the workplace

From one-handed fastening to lighter, significantly broader toecaps and new colour combinations: NESKRID 4AllFeet (Alphen, Netherlands) will be coming to OTWorld with a range of new products in the field of made-to-measure, orthopaedic safety work shoes. This is the first time that the company has been represented as an exhibitor. They will be presenting some extremely lightweight orthopaedic work shoes, amongst other things. Making the shoes to measure reduces the weight of previously available models by about half. The company is also adding a

waterproof Sympatex lining to their range of linings for diabetes sufferers.

New to their range of products are also some particularly lightweight moulded soles, with a design based on blotting paper, as well as a coarse, non-slip design for soles that are built up by hand. In accordance with their individual orthopaedic, anatomical and biomechanical condition and in line with the current EU guidelines, orthopaedic shoemakers are thus able to kit their patients out for their respective jobs. The range is completed with a line of off-the-shelf, semi-orthopaedic shoes. A new addition, here, is a transparent shoe, which is supposed to help the orthopaedic shoemaker with the choice of fitting. And, last but not least, there will be a new and simplified online ordering system on display at the show.
