ORTEMA GmbH

Contract manufacture of carbon fibre orthoses, using plaster casts or 3D scans

ORTEMA (Markgröningen, Germany) will be providing details at OTWorld of their distance-manufacturing service for knee, shoulder, elbow, hand and face orthoses, using thin, carbon-fibre material. The service is currently available all over Germany. The patterns are created using traditional plaster casts or 3D scans, taken in the surgical stores or in the orthopaedic technician's workshop. These are subsequently sent to the company. Then, within 10 working days (plus shipping time), the finished product is delivered, ready for fitting.
