

## New products of 2018

### ORTHOSCOOT GmbH

### ORTHOSCOOT® – greater MOBILITY, SAFE and SECURE

ORTHOSCOOT GmbH (Neusäß/ Vogelsang, Germany) will be presenting their first product at OTWorld – the ORTHOSCOOT NH1. This orthopaedic aid provides for people with chronic or temporary limitations to movement of the foot and ankle, by compensating for the disability. This is achieved by ensuring that the lower part of the affected extremity is correctly supported, allowing independent movement so that the load on the relevant leg is relieved at the same time. The ORTHOSCOOT NH1 allows the wearer to move safely in and around the home, whilst

providing suitable protection. Additional supports for walking can be affixed to cope with stairs and other obstacles. The device can be hired on a weekly basis and is sold exclusively via specialist surgical and healthcare stores. The ORTHOSCOOT is already being used by doctors and hospitals in Germany and more widely in Europe for professional in-patient care, as well as for post-operative care after discharge from hospital.
