

New products of 2018

Perpedes GmbH

New therapeutic shoes, Hallux Valgus Sneakers and individual finishes

Orthopaedic footwear technicians will find several new ideas at once on the Perpedes stand (Kirchheim/Teck, Germany), at this year's OTWorld. Their latest ranges of therapeutic shoes, for instance, go by the names of Lissabon light, Modena light and Ravenna light. Altogether, the company has twelve new products in its current portfolio, from airy sandals for hot summer days to colourful, lightweight trainers. Equally, the third generation of the comfortable UXGO Hallux Valgus Sneaker now appears in an updated, fashionable design. The possibility of customising the various composite fibre materials with individual motifs or logos makes for a product that strikes a more personal note.
