ReMED

New corset brace for rehabilitation after thoracic and / or lumbar-spinal injury

The Ukrainian company ReMED are exhibiting their new HARD CORSET BRACE / STRAIGHT BACK BRACE at OTWorld (item#R2301). The corset, which is made from hypoallergenic materials, is used as a rehabilitation aid following thoracolumbar spinal injury.

The corset mechanism combines horizontal and vertical straightening forces using the traction effect of non-stretch shoulder straps. These straps, together with specially pre-shaped stays along the spine that follow the projection of the vertebral transverse processes, pull the clavicle bones apart and the shoulder blades closer together.
