### Romedis GmbH:

#### Prize-winning hydrostatic impression system - **Symphonie Aqua**

To get an exact 3D image of the shape of the stump, Romedis GmbH have devised an innovative hydrostatic impression system, Symphonie Aqua, which won the Federal German Award for Outstanding Innovative Achievement in the Craft Trades in 2017.

The system makes it possible, for the first time, to record the pressure points on the residual limb in the prosthesis socket under real-life conditions and to make a completely accurate plaster cast that fits exactly when the prosthesis is operating under full load. The

functionality of a prosthesis is crucially dependent on the fit of the socket. Control, comfort and grip are all determined at the time of the plaster cast.

The company is exhibiting the Symphonie Aqua systems at OTWorld and will be presenting the digital version of the Symphonie Aqua line for the first time, exclusively for the show.
