### S&U MEDIZINTECHIK GmbH

#### Digitalisation of CPM therapy using the Kinetec® Kompanion™

S&U MEDIZINTECHIK GmbH (Zotzenheim, Germany) have combined CPM (Continuous Passive Motion) therapy and digitalisation in their Kinetec® Kompanion™ technology. These CPM devices, designed to encourage gentle postoperative mobilisation following joint surgery, are controlled via an intuitive interface on a tablet.

The Kompanion™ control interface contains indication-specific, predetermined treatments, together with a record of completed procedures and their outcomes. These can then be represented graphically and sent to

the relevant physician in charge, the hospital or care provider. When necessary, patients can be reached via a video call, in order to discuss and adjust the treatment options.
