THUASNE DEUTSCHLAND GmbH

Comfortable orthoses for knee and ankle; contemporary compression

The slender Genu OA, a new brace for the conservative treatment of osteoarthritis, is being brought to OTWorld by THUASNE DEUTSCHLAND (Burgwedel, Germany). A flat-profile joint, magnetic fastenings on the front and crossed straps are some of the contemporary details with which the brace is equipped. Winner of the German Design Award 2018, it is of proven efficacy, whilst being almost invisible, even when worn under narrow trousers.

The new Malleo Dynastab Vario ankle brace from THUASNE is of modular construction and can, therefore, be used for all stages of therapy – from acute to repair and remodulation phases. A broad opening at the back makes the brace as painless as possible to put on, and the double-pull system enables it to be fastened and released quickly. There is an additional 8-strand harness and a U-shaped plastic component to stabilise the joint for as long as is required.

Another exhibit at OTWorld is the MOBIDERM® Autofit, a new kind of compression wear for the patient to use as a self-care option during the maintenance phase of edema therapy. The MOBIDERM Autofit is an individually adjustable arm, calf or thigh stocking that can be used to consolidate the results of the complex physical drainage phase for edema, by preventing the return of a build-up of fluid after drainage; the volume of the affected area is quickly reduced and any fibrotic, sclerotic or edematous skin tissue is eased. At the same time, the product is easy to put on and take off, with a Velcro fastening and half-open design.

THUASNE's latest collection of compression hosiery, VENOFLEX Micro, will also be on display in Leipzig. Only deep-dyed yarns are used in their manufacture – to ensure increased depth of colour, together with greater stability in terms of shape and colouring, as well as avoiding sudden changes in shade. Those models with a firmer, framed Y-heel are available in subdued colours and either off-the-shelf or made-to-measure.
